Q-Span™ Workstation Kit
Application Kit for UR3e cobots from Universal Robots

Automate digital caliper measurements, data logging and part handling

- Improve precision, yield and quality in measurements of small parts
- Increase production capacity faster than headcount
- Boost employee engagement and job satisfaction - while reducing risk of repetitive stress injuries
- Install quickly with minimal changes to existing facilities and process flow
- Fast part changeover for agile automation
- ROI in less than 10 months

Flexible QC automation, rapid return on investment

The Q-Span™ Workstation Kit for UR3e collaborative robots is a flexible automation solution for QC measurement tasks. It delivers fast return on investment in high-mix, small-batch manufacturing environments.

Pick, measure, sort and place with one easy-to-use system

Automatically pick small parts, measure multiple features on each, and decide where to place the parts based on any measured dimension (for example pass, fail, or sort into bins by dimension ranges).

You can also record all measured data to your PC for statistical analysis.

With a Q-Span Workstation Kit, your QC team can improve small-part measurement consistency and repeatability, eliminate data entry errors, and spend time on higher-value tasks.

Complete measurement automation system

A Q-Span Workstation Kit includes three gripper/caliper tools, an example part, trays and fixtures, the NSR Devices URCaps software, and robot programs that demonstrate pick-measure-record-and-place for the example part. Use this application kit, along with your UR3e robot, as a starting point for automating measurement of your own specific parts.

What's in a Q-Span™ Workstation Kit?

1. Three NSR-PG gripper/calipers, one NSR-MTM Multi-Tool Mount and the NSR Devices URCap

2. Example part accessory set:
   a) Standard metrology fingertips set
   b) Example part(s)
   c) Trays for the example parts: parts-in, parts-passed, parts-rejected
   d) Measurement fixture for example part
   e) Zero-reference fixtures including gauge block (NIST traceable artifact)

3. Workstation table

4. Easy-to-use software to grasp and move parts, measure dimensions, make decisions and log data. **The kit includes sample robot programs for the example part, along with a cable and software for logging data to your PC.**

5. Documentation and videos for installation and operation

The Q-Span Workstation Kit is ready for user installation with a six-axis UR3e e-Series collaborative robot from Universal Robots *(purchased separately).*

**NSR Devices URCaps software and example robot programs included.** Use the examples as a starting point to build processes for your own parts.

**Fast setup, fast change-over**

Once you have configured a Q-Span Workstation Kit for your first part, you can easily expand its use to additional parts.

Each part may require part-specific fingertips, trays, fixtures and robot programs. The **NSR Devices URCaps software and UR teach pendant make it simple to build pick-measure-record-and-place processes for each new part.**

After you have developed a process for each part, change over between different parts takes only a few minutes.

**Contact us today for a free assessment of your first part.**
